Application

The analog pressure transmitter UNIVERSAL is suited for relative and absolute pressure measurement. Because of the reduced inner volume of the pressure chamber the transmitter is especially suited for connection to diaphragm seals. The diaphragm seal can be connected directly, via a capillary or via a temperature decoupler. For further information see diaphragm seal data sheets D5.

Since the intrinsically safe circuits are
 connected with the earth potential for safety
 reasons, potential equalization has to exist
 in the complete course of the erection of the
 intrinsically safe circuits.

Electrical data
 Sum of maximum values in the intrinsically
 safe circuits
 Ui = 30 V
 Ii = 100 mA
 Pi = 0,7 W

The table shows the values for different
 pressure transmitter signals:

signal mode	Ci [nF]	Li [µH]
2-wire 4...20 mA	33	20
3-wire 0(2)...10 V	43	30

Caution:
 Make sure that there is equipotential bon-
 ding along the entire wiring run both inside
 and outside the explosion hazardous area.

Switch off device if it is installed in zone 0
 and in temperature class T5 and T6 and it
 fails!

Burden

 with explosion protection $R_a = \frac{U_b - 15 V}{20 mA}$ (KOhm)
 - voltage output
 a current of 20 mA can be obtained in the
 case of devices with power output.
